

# Systems-Level Engineer Researcher Coordinator

Status: Open

## Role Overview

We're seeking a multifaceted technical leader to serve as the project's #2 position, working directly with the Project Coordinator. In this critical role, you'll bridge the gap between our development team and the broader StorPunk community, facilitating technical communication and ensuring developers can focus on coding without distraction.

**Cypherpunk Ethos Required:** We're looking for individuals who share our commitment to digital sovereignty and the cypherpunk ideals of decentralization, privacy, and freedom from corporate control. This isn't just a technical project – it's a movement toward a more equitable digital future.

## Essential Skills

- **Technical Breadth** - Understanding of distributed systems, P2P networks, and cryptography
- **Communication** - Exceptional ability to translate complex technical concepts for various audiences
- **Project Management** - Experience coordinating technical teams and tracking progress
- **Research Capability** - Skilled at synthesizing information and preparing technical briefs
- **Community Engagement** - Experience in technical community building and education

## Bonus Skills

- Familiarity with Rust ecosystem and development practices
- Experience with decentralized storage or networking projects
- Technical writing and documentation expertise
- Background in systems architecture or engineering
- Understanding of token economics and incentive systems
- Prior experience as a technical liaison or developer advocate

## Responsibilities

- Interface between development team and project coordinator
- Shield developers from distractions to maximize coding productivity
- Translate technical progress into accessible updates for the community
- Facilitate technical discussions and decision-making processes
- Research emerging technologies and approaches relevant to the project
- Prepare technical briefings and educational materials

- Help identify and onboard new technical contributors
- Coordinate testing and feedback processes

## What We Will Offer Upon DAO Launch

- Competitive market-rate compensation as a remote contractor
- Native \$PUNK token allocation for completed milestones
- **Founder Bonus:** Early contributors who join before DAO launch will receive additional founder allocation of tokens
- 100% remote, async-friendly work environment
- Freedom to set your own hours and work location
- Direct influence on project direction and community building
- Be part of a movement toward true digital sovereignty

## Ideal Candidate Profile

- Technical background with systems architecture experience
- Clear communication of complex concepts
- Systems-level thinking and problem solving
- Understanding of cypherpunk principles
- Ability to coordinate distributed development teams

## How to Apply

Interested candidates should reach out via the Retroshare contact method. Please include: - Summary of relevant technical coordination experience - Examples of technical communication or educational work - Approach to facilitating technical teams - Perspective on the importance of digital sovereignty - Availability and compensation expectations
